

# Thermostats

## Neostat & neostat air

Neostat and neoair communicate wirelessly to the neohub (optional extra) to offer a reliable and scalable network system. The mains powered neostat automatically repeats the data signal from other neostat/neoair in the home. If there are no neostat's installed, the neoair communicates directly with the neohub and so the neoplug or boost can be used to extend the communication distance.

## Easy navigation

The neostat/neoair series offer an easy to navigate programming system, providing all of the options across the bottom of the back lit display.

## Perfect for new build & retrofit

The neostat range is perfect for the new build & retrofit market. Whereas the neostat is mains powered, the neoair is battery powered and so is ideal for extensions or where mains cable hasn't been installed for the thermostat.

## Self-learning preheat

Self-learning preheat calculates the amount of heat up time required to ensure your home is warm when you wake and return home. This is automatically optimized throughout the year to save you money and will automatically detect any changes in your home that causes the preheat time to change.

## Temperature hold

Temperature hold facility allows you to hold a set temperature for a specific duration – ideal for parties. After which, the thermostat will revert back to the programmed setting.

## Key lock feature

Key locking is standard on all of the neo series and is an excellent way to reduce tampering of the heating system.

## Backlit display

The neo series incorporate a back light, which turns off automatically when not in use.
