

# Profi-panel batten 25mm up to 100mm

Insulated panel system for use with battens

*Profi-panel batten is ideal where a new real wood floor is to be laid over an existing subfloor, with an increase in floor height as low as 25mm.*

## Specification:

Profi-Batten floors have traditionally been the preferred method of installation for real or engineered floor boards on to existing floors. The batten itself provides the perfect fixing point for the secret nail method of installation.

The Profi-Batten system can be installed over the top of any existing floor providing there is sufficient headroom left above the finish floor level. To ensure the best use of the available height the batten thickness can be adjusted to suit the build-up height required.

## Installation:

Lay the battens, normally fitted at 400mm centres. Fit the panels (350mm wide x 1200 long) between the battens, cover with vapour barrier and floor deck.

## Floorcoverings:

- Carpets - over 18mm chipboard deck
- Timber - directly onto battens (18mm+)
- Laminate - over 18mm chipboard deck
- Tiles – over plywood deck

## Heat-source supply temperature:

- 60° C

## Pipe Centres:

- 200mm
